

Overview

- Find the approximated sparse solution of the linear system Original problem y = Ax**min** $\|\mathbf{x}\|_1$ subject to $\|\widetilde{\mathbf{y}} - \mathbf{F}\mathbf{x}\|_2$ Original sparse coding problem: find a sparse solution from a Dictionary learning from the K-SVD algorithm *dense* matrix K $\min_{\mathsf{D},\mathsf{W}} \|\mathsf{F} - \mathsf{D}\mathsf{W}\|_F^2 = \sum \sum \|\mathsf{f}_{i,j} - \mathsf{W}\|_F^2$ subject to ||**w_{i,i}**|' Approximation process $\widetilde{\mathbf{y}} \approx \mathbf{D}\mathbf{W}_{\widetilde{\mathbf{v}}} \approx \mathbf{D}\mathbf{W}\mathbf{x}.$ $Dw_{\widetilde{y}} + e_{\widetilde{y}} = DWx + e_Fx \Longrightarrow D(w_{\widetilde{y}} - Wx)$ $\|\mathsf{D}(\mathsf{w}_{\widetilde{\mathsf{y}}}-\mathsf{W}\mathsf{x})\|_{2} \leq (s+1)\epsilon.$ $\|\mathbf{Z}\|_{2} = \|\mathbf{W}_{\widetilde{\mathbf{y}}} - \mathbf{W}\mathbf{X}\|_{2} \leq \frac{(s+1)\epsilon}{\sqrt{(1-\rho)}}$ Transformed sparse coding problem: find a sparse solution • Reduced $\ell_1 - norm$ minimization problem from a *sparse* matrix $\min_{\mathbf{x}} \|\mathbf{x}\|_{1} \quad \text{subject to} \quad \|\mathbf{w}_{\widetilde{\mathbf{v}}} - \mathbf{W}\mathbf{x}\|_{2} \leq \widetilde{\epsilon}.$ **Experimental Results**

Applications

- Sparsity-based classification/clustering
- Image restoration (e.g., denoising, inpainting, demosaicking, super-resolution)
- Compressive sensing

Contributions

- Exploit the fact that signals can be well represented by a sparse linear combination of atom signals
- Reduce the original dense and large problem to a sparse ar *small* problem

Fast Sparse Representation with Prototypes Jia-Bin Huang and Ming-Hsuan Yang Electrical Engineering and Computer Science, University of California, Merced jbhuang@ieee.org, mhyang@ieee.org
