

## ECCN-Classify your Wafers

As a Jazz customer, you may wish to have Jazz export-ship your finished wafers to foreign test houses, packaging houses, foreign locations of your company or to your customers.

In order for Jazz to be able to do so, each wafer order of a new-process must be classified with an Export Control Classification Number or "ECCN," taken from the United States Export Administration Regulations (EAR).

**Since the ECCN is determined by the functionality of the device, and not the wafer-material, Jazz requests that its customers provide ECCNs for their corresponding wafer and/or MPW order(s):**

The ECCNs generally applicable to **electronic products and wireless products, respectively, are captured in [Category 3](#) and [Category 5 \(Part-I\)](#)** of the EAR. To access the overall EAR, please follow the hyperlink [http://w3.access.gpo.gov/bis/ear/ear\\_data.html](http://w3.access.gpo.gov/bis/ear/ear_data.html)

If, after reviewing the above information, including the above documents, and comparing the product descriptions therein with the description of your device(s), you have any questions, please contact Jazz's Import/Export Administrator, Eric Van Gilder, at (949) 435-8365 or [eric.vangilder@jazzsemi.com](mailto:eric.vangilder@jazzsemi.com)
